

Proactive Surveillance for Critical Utility Assets

Traditional security cameras are a great start to protecting your facilities, but an unmonitored camera can only record an incident, not prevent it.

The unique challenges of safeguarding remotely operated substations and other mission-critical utility infrastructure from theft, vandalism, and unauthorized access demand a more proactive approach. SecureAssist is a multi-layered security solution specifically designed for utilities to protect your most valuable physical assets.

Defense-In-Depth Design

Deter

We work with you to make site security features, such as signage, lighting, and cameras, evident to would-be intruders before they jeopardize your facility.

Detect

AI algorithms and video analytics monitor all camera feeds 24/7 and alert a live agent the moment suspicious activity is detected.

Defend

If the intruder elects to proceed, our agents can initiate site-defensive actions, such as talk-downs, and ultimately dispatch the authorities.

Leading Edge Technology

SecureAssist combines best-in-class technology in a single solution, all at a cost-effective price.

- AI algorithms accurately distinguish between objects, such as a person, an animal, and a vehicle, and eliminate false alerts by instantly confirming events you can ignore, like fallen branches or inclement weather.
- Our monitoring equipment, including cameras, video recorders, servers, networking equipment, and storage devices, is designed to perform reliably in harsh substation environments.
- Our thermal security cameras detect objects at all light levels.
- Our security command center integrates operations to process security events faster and more consistently.

Turnkey Services

Leave the worries, complexities, and ongoing hassles of security management to us. With our turnkey services, we'll handle every aspect of solution deployment, from system design through daily monitoring.

- Site security review and analysis
- Engineering and design by experienced security professionals
- Installation and setup
- Process development
- 24/7 active monitoring by highly trained agents with advanced distribution and utility knowledge
- Prompt dispatching and incident reporting

SecureAssist is powered by Util-Assist, a recognized innovator in technology and data-driven solutions for utilities.
